High-Converting Web Architecture Guide

Structuring Value Propositions, Service Tiers, Verifiable Proof & Multi-Step Intake Funnels

1. Above-the-Fold Hierarchy: The 5-Second Test

When a founder or decision-maker lands on your site, they should understand within 5 seconds: (1) what you build, (2) how quickly and reliably you deliver, and (3) what action to take next.

- [ ] **Live Availability & Turnaround Anchor**
  Display a clear availability indicator (e.g., "1 project slot open for next month - Remote (UTC+1)") above the headline to establish real-time responsiveness.
- [ ] **Outcome-Driven Headline + 3 Scannable Bullets**
  Lead with the business benefit ("Ship faster with a developer who handles strategy, design, and code") supported by 3 check-marked differentiators.
- [ ] **Pair the Hero with a "3-Stage Delivery Protocol" Card**
  Reduce buyer risk immediately by showing how the engagement works (Fast delivery in 2-4 weeks, Launch-ready QA, Weekly async updates) right beside the primary CTA.

2. Productized Service Packaging (Eliminating Decision Fatigue)

- [ ] **Anchor 3 Distinct Packages by Buyer Stage**
  Structure offerings into Launch Essentials (Most Popular / 2-3 week sprint), Conversion Refresh (Best Value / optimization), and Growth Support (Flexible monthly retainer).
- [ ] **Nested Starter vs. Plus Scope Tiers**
  Give buyers transparent self-selection inside each package with a clear Starter price and a highlighted Plus tier for full multi-page or automated workflows.

High-Converting Web Architecture Guide

Structuring Value Propositions, Service Tiers, Verifiable Proof & Multi-Step Intake Funnels

3. Verifiable Engineering Proof Over Vanity Claims

Technical buyers immediately distrust unverified agency clich-s. Replace generic fluff with concrete, verifiable proof of engineering and operational impact.

- [ ] **Pin Quantitative Outcome Chips to the Top of Case Studies & Quotes**
  Surface the concrete result at the very top of the card (e.g., "0 calendar conflicts", "-92% admin overhead", "100% Static SSG", "105+ automated tests") before the long-form text.
- [ ] **Show Real Application Screens & Architecture Deep-Dives**
  Include real interface views (calendars, dashboards, billing workflows) alongside Problem -> Solution -> Implementation breakdowns and tech stack badges.

4. Multi-Step Project Intake & Mobile Touch Ergonomics

- [ ] **4-Step Progressive Project Brief Wizard**
  Break long contact forms into 4 low-friction steps: (1) Contact Info, (2) Project Scope Pills & Goals, (3) Budget Tier & Target Date, and (4) Review & Submit.
- [ ] **Immediate Post-Submission Calendar Booking**
  Once the brief is submitted, immediately present a direct Cal.com scheduling trigger while buyer intent is at its peak.
- [ ] **Thumb-Friendly Mobile CTAs (Min-Height 48px)**
  Set primary mobile buttons to full width with min-h-[48px] and use a compact 2-column side-by-side tier comparison to prevent vertical scroll fatigue.
